

# Kalea

Kalea is 6 years-old and is diagnosed with an extremely rare form of leukemia called mixed phenotype leukemia. She is a beautiful and vibrant little girl who is fighting for her life. Her parents are living anyone's worst fear and her family's lives have been shaken. She needs a stem cell or marrow transplant, but doesn't have a match due to her diverse tissue type. She is half Filipino and half Caucasian, and her lifesaver will most likely share the same background. Please join the registry to help Kalea and patients like her.

**You could be the one to save a life!**
